Project Description

*Locate, identify, and document plant species in the Mid-Gulf region for submission to the **Native Plant Information Network***

Examples of approved volunteer activities:

- Locate & identify specimens of currently unrepresented or under-represented Texas native plants
- Make high quality photographs documenting plant structure & appearance
- Create high resolution image files for submission
- Record required data in MS Excel Spreadsheet from Wildflowers.org
- Electronically submit images and data for publication
- Communicate with Collections Manager and staff as needed

As a guideline, members may count ¼ hour of VT for each correctly formatted and identified image (and associated spreadsheet) submitted to the NPIN website.

While most of the field work for this effort will likely be concurrent with other, unrelated, activities, participants may record UP TO two(2) hours per week for locating, identifying and photographing specimens for submission if time is not already included in other TMN volunteer activity.
